

Journalist

Background

Journalist who has worked for 10 years in print journalism. She has worked in large cities such as Lima. After covering protests, she noticed changes in her devices, they were not working properly. She had friend requests from trolls in social networks. She was getting strange calls. She noticed she wasn't the only one with the same problems, so she teamed up with several journalists; they learned that they were being watched, and that some accounts were being hacked. She has access to technology and good internet connection.

Goals

- Achieve safe digital habits.
- Identify digital risks that go unnoticed.
- Safeguarding information from sources to share with the audience.

Threats

- Sexist threats for being a woman journalist.
- Adversaries have better technological capabilities to attack.
- Threats to interrupt the investigations that are being carried out.
- Difficulties to access the accounts of the web of the journal or also identity theft.

Use of technology

She has accounts in many social networks, like blogs. She has a Mac computer for design and audiovisual production. But at work she also has a laptop with Windows that is a shared device. She connects to public Wifi networks and shares devices with colleagues to pass material. She stores sensitive information on his devices, without encryption. He uses Google services to store information, sends files via Facebook.

Strengths

- Meet with other journalists to discuss digital security issues. And take joint actions to strengthen digital security.
- Seek out communities and organizations that can advise you on digital security issues.

Questions

- How can I back up the sensitive information I have?
- On which platform can I conduct interviews on sensitive topics?
- How can I identify attacks on my digital accounts?
