Environmental Communicator

Background

He is a radio communicator who has worked in documenting the contamination of oil, mining and hydroelectric companies in indigenous territory. He does interviews about the environmental impact in the communities. He has chosen to visit the communities, to stay there, to see what is happening, to share with the community. To see the discrimination and threats that the communities are victims of. He belongs to the community of Tucta, in the municipality of Nacajuca.

Technology use

They have started using Free Software to set up a radio station. And they have also organized with communities to use other organizations' free community storage infrastructure to strengthen their information security. They have received workshops on VPN use. They have also created their web page.

Goals

- Transparency in the actions of mining companies.
- Create spaces for alternative voices.
- Generate alternative communication products.
- Create intercultural communication that exposes the realities of the communities.

Strengths

- They have knowledge of technology.
- They use Free Software and secure storage to back up their information.
- They have concerns about digital security.

Threats

- Mining companies are threatening those who produce and disseminate information.
- Threats by drug traffickers to journalists.
- Cell phone spying and wiretapping.

Questions

- How can we be monitored through our cell phone?
- Is there a mechanism to protect us through social networks?
- What kind of tools can I use to further protect my security?
